SUMMARY

Founder of Thuniv Industries, an AI product studio building for engineering, construction, and B2B sales teams. Started it nights and weekends in March 2026 while still a Product Manager at Maruti Suzuki, then left that role in July 2026 to build full-time. Six months in: one product is a working MVP, the other has paying customers and recurring revenue.

Solo across product, engineering, and go-to-market so far - no co-founder yet. Now looking for a Founder's Office, Chief of Staff, or 0-to-1 execution role at a funded early-stage startup, to learn how a team does what one person can't, sharpen what a solo build doesn't force, and find the right co-founder along the way.

Solo founder with early revenue, looking for a season in someone else's Founder's Office before going all-in again.

WORK EXPERIENCE

Founder

Mar 2026 - Present

Thuniv Industries

- Left a Product Manager role to build full-time, after validating demand nights and weekends for four months.
- Shipped ThadamIQ, an autonomous AI sales agent that lets small manufacturers sell direct instead of through a distributor - 3 paying licences and ~₹15k MRR to date, sold and supported solo.
- Built PLMC to a working MVP: an AI-native PLM/BOM platform for construction, with an assistant that can act on project data under a two-phase confirm safeguard.
- Running product, engineering, and sales as a team of one - now looking to pair that with Founder's Office to learn what a solo build can't teach.

Product Manager - Engineering Efficiency

Apr 2025 - Jul 2026

Maruti Suzuki India Limited, Gurugram

- Drove digital transformation in a legacy automotive environment by taking 0-1 ownership of the AI/ML product roadmap—translating complex business needs into technical requirements and managing cross-functional teams and external vendors.
- Conceptualized, built, and launched 2 enterprise platforms end-to-end within 12 months: Smart Pulse (social sentiment analysis) and Forge AI (GenAI-powered test report automation).
- Led complete product lifecycles—from PRD authoring and KPI definition to UAT and change management—successfully onboarding 2,500+ legacy users and replacing decades-old manual workflows.

Digital Transformation Analyst - PLM and AI

Jun 2023 - Apr 2025

Renault Nissan TBCI (Global Capability Centre), Chennai

- Part of a Renaultion Virtual Twin (Renault + Revolution) Program at Renault Group a strategic digital transformation initiative redefining how vehicles are engineered through a digital-first approach.
- Used Advanced Machine Learning algorithms to automate existing manual tasks which took 100's of man hours
- From understanding business requirements and evaluating technical feasibility to designing, developing, and validating robust business logic implementations. Collaborated closely with cross-functional stakeholders to translate engineering needs into scalable digital solutions.

SKILLS

Founder / 0-to-1: Solo 0-to-revenue execution, Customer acquisition, Pricing & GTM, Full-stack product ownership, Bootstrapped shipping

AI and ML: LLMs, Prompt Engineering, NLP, Sentiment Classification, Scikit-learn, OpenAI APIs, Machine Learning, RAG

Programming: Python, JavaScript

Product and Program: PRD Writing, Sprint Planning, KPI Definition, UAT, Stakeholder Management, 0-to-1 Product Development, Post-Launch Adoption

Tools and Platforms: Streamlit, 3DEXPERIENCE (Dassault), Scikit-learn, X API, YouTube API, Claude, Cursor

Domain: Manufacturing, Automotive, AI Transformation, PLM, Process Optimization, Engineering Design

EDUCATION

B.Tech, Mechanical Engineering - CGPA: 9.05 / 10 2019 - 2023

B.S. Abdur Rahman Crescent Institute of Science and Technology, Chennai

PROJECTS

IntelliCAD Personal Project

LLM-powered Text-to-CAD Generation

Converts natural language descriptions of 3D geometry into ready-made CAD files using LLMs and OpenAI APIs - eliminating manual sketching and constraint-dragging for engineers.

Stack: Python, LLMs, Prompt Engineering, OpenAI APIs, Streamlit

[GitHub](#) [Live App](#) [Demo Video](#)

DrawingDIFF Personal Project

Engineering Drawing Version Comparison and Audit Tool

Upload two drawing revisions to get a high-contrast pixel overlay highlighting every changed line and dimension, plus an auto-generated audit trail ready for export.

Stack: Python, LLMs, OpenAI APIs, Streamlit, Computer Vision

[GitHub](#) [Live App](#) [Demo Video](#)

Election Pulse Freelance

Social Media Sentiment Platform for Political Analytics

Built for a political party client: ingested unstructured social media data via X API and YouTube API and transformed it into actionable sentiment dashboards for campaign teams.

Stack: Python, NLP, Sentiment Classification, X API, YouTube API, Analytics
