Summary

AI & GenAI-oriented Technical Program / Solutions Professional with **3 years of experience** delivering **AI, ML, and GenAI-enabled solutions** in the automotive domain. Began career as a **hands-on ML and coding contributor** within enterprise platforms such as **3DEXPERIENCE** and later expanded into end-to-end project management of AI solutions within Maruti Suzuki. Brings **strong technical depth, hands-on execution using GenAI tools**, and the ability to translate ambiguous engineering problems into practical, deployable solutions. Known for working closely with stakeholders to derive clear requirements and driving solutions that are usable, scalable, and adoption-focused.

Skills and Expertise:

- Applied AI/ ML/ LLM
- GitHub
- Pytorch / Tensorflow
- Scikit Learn
- Data-Driven Decision Making
- Python, C++ (DSA)
- Agile / Scrum, Roadmaps, KPIs, UAT, Release
- Open AI / Anthropic API

Experience

Technical Program Manager – AI and ML Maruti Suzuki India Limited

04/2025 to Present
Gurugram, Haryana, India IN

- Led end-to-end execution of enterprise AI adoption programs across core engineering teams, focusing on LLM-enabled analytics, automation, and decision-support tools.
- Acted as the bridge between data scientists, developers, business teams, and vendors, ensuring models and GenAI systems were usable, adopted, and measurable.
- Owned roadmap planning, feature prioritization, sprint execution, UAT, launch, and post-release adoption tracking.
- Applied hands-on GenAI tooling (LLMs, Natural Language Processing, prompt engineering, validation loops) to accelerate prototyping and reduce dependency on heavy custom development.

Key Initiatives

Smart Pulse – Social Media Sentiment & Insight Platform

- Delivered an internal sentiment analytics product converting unstructured social media data into actionable dashboards for business teams.
- Defined PRDs, acceptance criteria, KPIs, and adoption metrics for 2,500+ users.
- Led output validation, UAT, and iterative improvements based on feedback.
-

ForgeAI – LLM-based Report & Document Generation Platform (Ongoing).

- Project identified by myself and initiated with 3 Junior Engineers.
- Reframed manual, error-prone reporting workflows into an LLM-powered document generation system.
- Defined success metrics and delivered ~20,000 man-hours annual savings.
- Worked hands-on with GenAI tools while coordinating a small delivery team.

Digital Transforation Analyst, Product Lifecycle Management 06/2023 – 04/2025

Renault Nissan Technology & Business Centre India (Automotive GCC)

Chennai, Tamil Nadu, India IN

- Supported enterprise PLM and AI-driven automation initiatives across engineering functions.
- Built POCs and process automation using Python and ML-based analysis, later scaling solutions to enterprise level.

- Contributed to ML-based quality checks and early issue detection systems, reducing manual effort by ~95% and inspection time by ~70%.
- Known for translating complex engineering problems into practical digital and AI-enabled solutions

Key Initiatives

- Designed and implemented ML classification algorithms to automatically assess and classify vehicle design clashes into Critical, Needs Review, and Acceptable categories.
- Achieved ~70% reduction in clash detection lead time by eliminating manual triage and enabling early-stage automated validation

Personal / Academic Projects:

Election Sentiment Analysis (Personal Project)

- Built an NLP-based pipeline to analyse public sentiment around elections using social media and news text.
- Applied text preprocessing, sentiment classification, trend analysis, and insight visualization.
- Demonstrated practical understanding of NLP concepts, not just model theory.
- Implemented a data-grounded conversational AI interface that responds based on analysis of tweet data.

Text-to-CAD Generation using LLMs (Personal Project)

- Experimented with LLM-driven generation of CAD instructions/models from natural language inputs.
- Focused on prompt design, structured CAD generation, and iterative refinement.
- Showcased ability to apply GenAI creatively to solve engineering problem statements.

Vibration Based Granular Size Detection using ML (Academic Project)

- Designed an ML-based solution to estimate granular material size by analysing vibration signals (Natural Language) from mechanical systems.
- Extracted and engineered features from time-domain and frequency-domain vibration data to capture size-dependent patterns.
- Trained and evaluated supervised ML models to classify or regress granular size ranges with measurable accuracy.
- Demonstrated how sensor data + ML can replace manual inspection with a scalable, automated quality detection approach.

Education

B TECH: Mechanical Engineering - 9.05 CGPA

B S Abdur Rahman Crescent Institute of Science and Technology

Chennai, Tamil Nadu, India IN

Key Achievements

- Best Employee Award Q1 2024. Awarded Best Employee for designing and implementing optimised CAD assembly process, reducing lead time from 3 days to 0.5 days.

Courses/Certifications

- | | |
|--------------------------------------|--|
| • Google Agile Project Management | • Google Project Management Professional |
| • Google Data Driven Decision Making | • Python |

Languages

English - Proficient, Tamil - Native, Hindi – Beginner
